# How To Create/Add New Package Inside Src Folder In Android Studio

Sometimes we need to separate our java classes according to their functionality. Keeping various java classes in different package name make the project more understandable for anyone.

## How to Create/Add new Package inside src folder in Android Studio

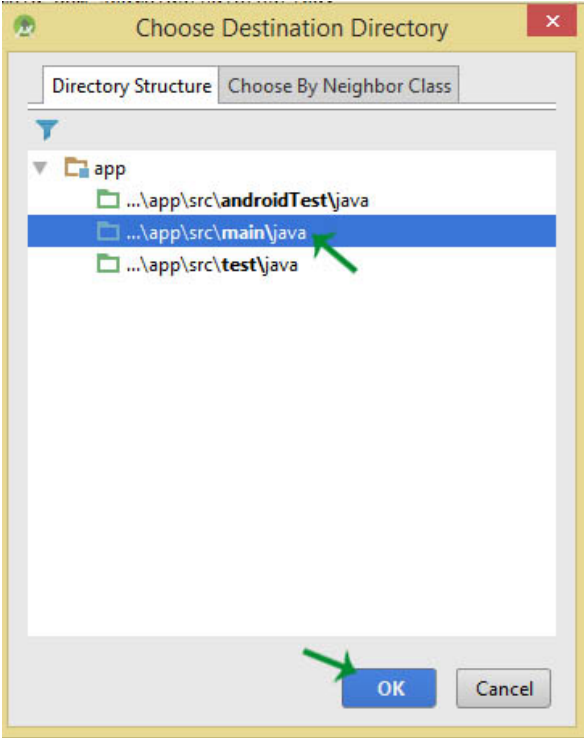

The following are the steps to add new Package name inside src folder:

- Step 1:** Open Android Studio and Navigate to any view(Android or Project)
- Step 2:** In Android View you will have two folders: app and Gradle Scripts
- Step 3:** Open App folder then open Java folder. Right click on Java folder and select New > Package.

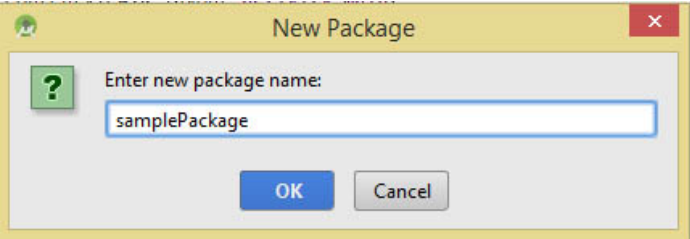

- Step 4:** Choose directory destination which main\java and click OK.

Ecommerce Store Android App Project Source Code (/sourcecode/ecommerce/)	
Smart News Android App Project Source Code (/sourcecode/news/)	
Convert Website Into Advance Android App Project Source Code (/sourcecode/webview/)	
City Guide Android App Project Source Code (/sourcecode/city/)	
QR/Barcode Scanner Android App Project Source Code (/sourcecode/qrcode/)	
Radio Streaming Android App Project Source Code (/sourcecode/radio/)	
Premium Project Source Code:	
Live TV Streaming / Youtube Channel Android App Source Code	

**Step 5:** Give a name to new Package(For example: samplePackage). Click Ok.

**Step 5:** Now you have samplePackage inside JAVA folder. You can keep separate Java files inside it.

Hi,

Here we show how to create raw folder <https://abhiandroid.com/androidstudio/create-raw-folder-android-studio.html> (<https://abhiandroid.com/androidstudio/create-raw-folder-android-studio.html>)

Similarly you can create ‘res’ folder or any folder you want in Android Studio.

Reply (<https://abhiandroid.com/androidstudio/add-new-package-inside-src-folder.html?replytocom=71#respond>)
