

# Shortcut Key to Return to Usage position

[Ask Question](#)

0

Using Android Studio on a Windows platform, when my cursor is on a class or method, I could use Ctrl-B to go to the declaration of a class or method to view the definition.

What is the shortcut key that will return me to the point of origin (where the class/method was referenced)?

android-studio

In Eclipse there is a shortcut for this ( `Alt+Left` ). I haven't found a shortcut for Android Studio that does the same, so I use `Ctrl+Shift+Backspace` instead. It will return the cursor/focus to the code where I last edited something. Before I use `Ctrl+B` on a method or class I press space then backspace somewhere near the code, so the cursor can return there when I press `Ctrl+Shift+Backspace` after `Ctrl+B` .
